To whom it concerns

This is to certify that Professor George Zoupanos is a distinguished, internationally recognized scientist, with a rich scientific record of high-rank publications in international journals and contributions to conferences with many presentations of talks and articles.

As a director at the Max Planck Institute for Physics and head of the Theory Department, I confirm that Professor Zoupanos has been invited to our institute every year for the period of 1-2 months to work at our institute as a visiting scientist and to provide and share his scientific expertise and activity.

Professor Zoupanos is one of the key persons of the Greek theoretical particle physicists, representing and spreading the Greek contribution to this branch of science in the world-wide community of particle physics. He has had an enormous impact by establishing and running the Corfu Summer Institute/ Hellenic School and Workshops on Elementary Particle Physics and Gravity, which takes place every year in Corfu. This event attracts top-class scientists as well as students and young researchers from all parts of the world and thus contributes significantly to the international visibility and reputation of science in Greece.

Wolfgang Hollik
